

MR. THANASORN TECHASEN

Software Engineer — Backend

Bangkok, Thailand.

+66(0)81-988-1464

hydrolysis4re@gmail.com

Personal Summary :

Back-end developer with 3+ years of experience building serverless systems on AWS — including e-commerce checkout, payment integrations, and a global CMS platform at Unicity International. TypeScript microservices on AWS Lambda, infrastructure as code with AWS CDK, and multi-stage CI/CD pipelines. Daily practitioner of AI-assisted development (Claude Code, MCP, custom agent skills). Focused on scalable APIs, cloud infrastructure, and developer tooling.

Experience:

Software Engineer | Unicity International (MLBS) 2024 - Present

Global CMS Platform - international content management and enrollment system

- Develop and maintain a global CMS platform serving Unicity's international markets — a monorepo comprising 24 AWS Lambda microservices, 16 internal CLI tools, and React admin and enrollment web applications.
- Design and build RESTful APIs in TypeScript on Node.js / AWS Lambda, backed by AWS DocumentDB (MongoDB-compatible), MemoryDB (Redis) caching, and S3 storage.
- Define infrastructure as code with AWS CDK, including a shared Lambda stack construct reused across all services; develop and test services locally with LocalStack and Docker.
- Ship through a multi-stage CI/CD pipeline (dev → qa → uat → prod) on GitHub Actions with branch-based deployments and automated post-deploy tests.
- Contribute to the React 18 + TypeScript frontend (MUI, Vite, Turborepo)
- Collaborate with cross-functional teams to translate user stories into scalable backend solutions and integrate server-side logic with front-end features.

Back-end Developer | Unicity International (MLBS) 2023 - 2024

E-commerce system

- Developed an e-commerce backend serving Unicity's international markets — AWS Lambda microservices supporting customer enrollment and checkout flows.
- Designed RESTful APIs in JavaScript on AWS Lambda, backed by Amazon Aurora (MySQL).
- Integrated third-party payment APIs in collaboration with the payment team.

Service Engineer | Hytera Communications 2022

- Prepared and configured radio communication devices (PoC, TETRA, DMR, analog) for customer demonstrations and proof-of-concept testing.
- Supported customers in system administration and quota management; configured and installed device parameters using CPS tooling.

System Design Engineer | AZO Ltd. 2018-2021

- Translated sales requirements into product system designs and produced Process Flow Diagrams (PFD) in LogoCAD and AutoCAD.
- Coordinated with procurement and project teams on design and equipment costing; prepared quotations in SAP.
- Delivered system designs for clients including Mead Johnson, PTT, and JD Food.

RF Engineer / Drive Test Engineer | OCK Steadcom 2016-2017

DiGi – ZTE Project, Central & Sarawak Region, Malaysia

- Performed full single-site verification (SSV) drive tests — mobility and static testing across LTE, VoLTE, 3G, and 2G (DL/UL, PS setup, CSFB, IRAT).
- Analyzed drive-test logs and monitored 2G/3G/LTE OSS KPIs for antenna-swap sites using NetNumen and Nemo Analyzer; produced SSV and final acceptance reports.

RF Engineering Intern | Huawei Technologies 2015

- Monitored and updated cell-site information; practiced drive-test analysis tooling. Selected for the Telecom Seed Project, including a visit to Huawei headquarters in Shenzhen.

Technical Skills:

- Languages: TypeScript, JavaScript (Node.js), SQL, HTML/CSS
- Backend: Node.js, AWS Lambda, RESTful APIs, Express, Serverless framework
- Cloud & DevOps: AWS (CDK, DocumentDB, MemoryDB, S3, CloudFront, Secrets Manager), Docker, LocalStack, GitHub Actions CI/CD
- Databases: MongoDB / DocumentDB, Redis, MySQL / Amazon Aurora
- Frontend: React 18, MUI, Vite, Recoil
- Tools: Git, Turborepo, Biome, ESLint, LaunchDarkly
- AI-Assisted Development: Claude Code (agentic coding), custom agent skills & slash commands, MCP integrations, prompt engineering, AI code review workflows, Markdown knowledge-base (“second brain”) for documentation and planning
- Engineering (prior career): AutoCAD, LogoCAD, Inventor, SAP

Education:

- B.Eng. Electrical Engineering | Chulalongkorn University 2013 – 2016
- Senior project: Development of an electrocardiograph (ECG) and heart-rate analysis system on smartphones.

Languages & Additional:

- Languages: Thai (native), English (professional working proficiency — daily use in an international team)
- Interests: Cloud & AI technology, fintech, biomedical engineering, badminton, travel
